Software, Applications and Licensing Guide

This guide covers software installation, Microsoft 365, developer tools, software licensing, and common software errors.

1. Software Installation Policy

1.1 Installing Approved Software

- Windows: Open Software Center from the Start Menu. All IT-approved apps are available there.
- Mac: Open the Self Service app. Approved apps are available for one-click install.
- Request new software: IT Portal, New Request, Software, New Application Request.
- Manager and IT Security approval required before installation of any new software.
- SLA for new software approval: 5 business days.

INFO: Installing unauthorized software violates the Acceptable Use Policy and may result in disciplinary action.

1.2 Standard Software on All Machines

- Microsoft 365: Word, Excel, PowerPoint, Outlook, Teams, OneNote.
- Browsers: Google Chrome, Mozilla Firefox, Microsoft Edge (default).
- Adobe Acrobat Reader DC, 7-Zip, Notepad++.
- Cisco AnyConnect VPN, Microsoft Teams, Zoom.
- CrowdStrike Falcon (endpoint protection - do NOT disable or uninstall).
- LastPass Enterprise password manager.

2. Microsoft 365

2.1 Activating Microsoft 365

- Open any Office app (Word, Excel), click Sign In, use your company email user@company.com.
- Do NOT enter a product key. Use the Sign In method only.
- Verify activation: File, Account. Should show Product Activated under your name.
- If activation fails: run Microsoft Support and Recovery Assistant from Software Center.

2.2 OneDrive Setup

- OneDrive auto-starts on company machines. Sign in with your company email.
- Save all work files to OneDrive - Company Name folder, not local Documents.
- Storage quota: 1 TB per user for OneDrive, 25 TB per team for SharePoint.
- Sync issues: right-click OneDrive icon in system tray, Settings, Account, Unlink this PC, then re-link.

INFO: Always save work documents to OneDrive, not local drives. Local drives are NOT backed up by IT.

2.3 Microsoft Teams Troubleshooting

- Audio and video issues: Teams, Settings (three dots), Devices, select correct microphone, speaker, and camera.

- Cannot join meeting: clear Teams cache by closing Teams and deleting the folder at AppData\Roaming\Microsoft\Teams\Cache.
- Teams crashing: click profile picture, Check for updates.

3. Developer Tools

3.1 Approved Development Tools

- IDEs: Visual Studio Code, JetBrains Suite (IntelliJ, PyCharm, WebStorm), Visual Studio 2022.
- Version control: Git (pre-installed), GitHub Desktop, GitKraken.
- Containers: Docker Desktop (requires IT approval to enable Hyper-V on Windows).
- Databases: DBeaver, Azure Data Studio, pgAdmin.
- API testing: Postman, Insomnia.
- Terminal: Windows Terminal, PowerShell 7, WSL2 with Ubuntu 22.04.

3.2 GitHub Enterprise Access

- URL: https://github.company.com. Login via SSO through Okta.
- Request repository access from your team lead.
- Set up SSH: generate key pair and add public key to your GitHub profile.
- Clone via SSH: git clone git@github.company.com:team/repo.git
- GitHub Copilot is available for all developers: enable in VS Code via the Copilot extension.

4. Software Licensing

4.1 License Management

- View assigned licenses: https://licenses.company.com
- Request additional license: IT Portal, License Request, select software and justify the need.
- Return unused licenses via the portal when no longer needed.

4.2 Licensed Software by Department

- Engineering: GitHub Enterprise, JetBrains Suite, Docker Desktop, AWS Developer Tools.
- Design: Adobe Creative Cloud full suite, Figma, InVision, Sketch.
- Finance: SAP Business One, QuickBooks, Tableau, Power BI Premium.
- Sales: Salesforce CRM, HubSpot, LinkedIn Sales Navigator, DocuSign.
- HR: Workday, DocuSign, LinkedIn Recruiter, Greenhouse ATS.
- Marketing: HubSpot Marketing Hub, Semrush, Canva Pro, Hootsuite.

5. Common Software Errors and Fixes

5.1 Windows Cannot Find the Specified File

- The shortcut target may have moved. Right-click shortcut, Properties, fix the Target path.
- Reinstall the application via Software Center if the executable is missing.

5.2 DLL File Missing Errors

- Run sfc /scannow as Administrator to repair system files.
- Install the relevant Visual C++ Redistributable from Software Center.

5.3 Application Won't Start After Windows Update

- Try running as Administrator: right-click the application icon, Run as administrator.
- Run in compatibility mode: right-click, Properties, Compatibility tab.
- Reinstall the application from Software Center.
- Submit a ticket with the application name and error message. SLA: 4 hours for business-critical apps.
